

MOUNTING HARDWARE

For data center branch circuit power whips

Mounting hardware allows data centers to secure power cable receptacle boxes to both overhead and underfloor structures. A secure mounting position provides stability, quicker connect and disconnect access and facilitates airflow in and around the boxes. Elevated mounting positions keep cables off the floor limiting the risk of shorts or outages in the event of water leakage.

UNDERFLOOR & OVERHEAD MOUNTING OPTIONS

**Cable Tray • Ladder Rack • Basket Tray • Pedestals
Stringers • Horizontal Supports • Vertical Supports**

Mounting Ears

Uni-Strut Mounting Bolt

Pedestal Clamp

Dual Pedestal Clamp

Cast Beam Clamp

C50 Cable Tray Bracket

Mounting Plate

Dual Uni-Strut Mounting Bolt

B-Line Conduit Hanger

B-Line Flange Beam Clamp

Most mounting options can be made to accommodate both weatherproof and 1900 style boxes.

Regardless if you are feeding power overhead or underfloor, PDU Cables can pre-install mounting hardware on its branch circuit power whips to facilitate a stable, secure mounting position for easier access and improved cable management.
